

FLEET & FACILITIES DEPARTMENT

Playbook

How the Facilities Department runs — every environment, role, rhythm and rule, in one place.

BBT & BBN commercial buildings

Residential & short-stay accommodation

Fleet operations

Brainbox Group

Edition 2 · 2026

Internal — controlled document

CONTENTS

What's in this manual

Four parts: how the department runs, what each person owns, the working checklists, and the reference standards that keep it all consistent.

PART ONE — THE OPERATING MANUAL

- 1.1 Purpose of this manual
- 1.2 Assets & functions we manage
- 1.3 Systems of record
- 1.4 Operating philosophy & escalation
- 1.5 Roles & working arrangements
- 1.6 Accommodation cleaning framework
- 1.7 Daily operating rhythm
- 1.8 Weekend operations
- 1.9 Weekly rhythm
- 1.10 Monthly rhythm
- 1.11 Reporting & assurance
- 1.12 Asset register & renewal
- 1.13 Non-negotiable rules
- 1.14 Operating outcome

PART TWO — DUTY STATEMENTS

- 2.1 **May** — Facilities Manager
- 2.2 **Jho** — Facilities Assistant (part-time)
- 2.3 **Arvin** — Maintenance Lead
- 2.4 **Jong** — Driver & Front-of-House
- 2.5 **Venus & Ivy** — Cleaning team
- 2.6 Training & competency matrix

PART THREE — CHECKLISTS

- 3.1 Studio apartment cleaning & consumables
- 3.2 Monthly building safety & compliance
- 3.3 Weekly fleet vehicle maintenance

PART FOUR — REFERENCE

- 4.1 Response & resolution SLAs
- 4.2 Asana conventions
- 4.3 Vehicle accident & incident
- 4.4 Keys, codes & access register
- 4.5 Document control
- 4.6 Monthly report

HOW TO USE THIS MANUAL

Read part one once, together, so the whole team shares the same picture. Keep part two close — it is the day-to-day reference for what you own, what you may decide, and when to escalate.

CONTROLLED DOCUMENT

This is the authority for how Facilities work is done. Where it differs from habit or memory, the manual wins. Changes are made deliberately and re-issued, not made on the run.

01

How the department runs

The shared picture — what we look after, the systems that govern every decision, and the daily, weekly and monthly rhythms that keep it all predictable.

1.1–1.2 Purpose, assets & the functions we manage

1.3–1.4 Systems of record, philosophy & escalation

1.5–1.6 Roles, working arrangements & cleaning framework

1.7–1.14 Daily, weekly & monthly rhythms, reporting & rules

Purpose of this manual

This manual exists to provide certainty. It removes ambiguity from daily operations, defines how work flows through the Fleet & Facilities Department, and establishes who does what, when, and why.

Facilities work often fails when it relies on memory, goodwill, or constant verbal instruction. This manual replaces those habits with structure. It creates a rhythm that is predictable, auditable and repeatable — so good outcomes don't depend on any one person remembering the right thing at the right moment.

WHO IT APPLIES TO

All Fleet & Facilities staff — during normal operations, peak demand and weekends, and regardless of individual availability, workload pressure or competing priorities.

WHEN YOU MAY DEVIATE

Only where safety, legal compliance or guest welfare requires it. Every deviation is recorded and reviewed — never made quietly.

Assets & functions we manage

The department operates across four environments. Each has a different demand profile and a different tolerance for delay — but all are managed through the same functions and the same systems.

BBT & BBN commercial buildings

Two buildings, both operating 24×7. Shared spaces are heavily used at lunch and shift changes, and small lapses are noticed quickly. Work here is preventative — the goal is to avoid complaints, not respond to them. **Only BBT has parking**, and the company vehicle fleet is stored there.

Residential & short-stay

Ten residential properties, five run as short-stay accommodation. Guest expectations are high and tolerance for defects is low. Work here is time-bound: check-in readiness is not flexible and cleaning windows are fixed.

Vehicle fleet

Vehicles support staff transport and operations, and their condition reflects organisational discipline. Stored and managed at BBT, with Facilities responsible for protection, presentation, availability and safety. Repairs are escalated, not improvised.

One standard, everywhere

However different the environments feel, they share one safety standard, one set of systems, and one chain of accountability through the Facilities Manager.

The functions we deliver

Every task belongs to one of these functions. Naming them this way keeps responsibility clear and makes it obvious what is covered — and what is missing.

BUILDING FUNCTIONS

 Maintenance

 Utilities

 Safety

 Access

 Cleaning

 Consumables

 Asset renewal

FLEET FUNCTIONS

 Driver management

 Route management

 Driver rostering

 Maintenance

 Safety

 Cleaning

 Repairs

 Asset renewal

Each function on a cycle

Most functions repeat on a predictable cycle. This is the map the rest of part one builds on — daily work removes risk, weekly work prevents backlog, monthly work keeps assets safe and compliant, and triggered work responds to bookings and faults.

Function	Daily	Weekly	Monthly	Triggered
Building cleaning (BBT & BBN)	●	○	○	○
Accommodation cleaning	○	○	○	●
Access, security & traffic	●	○	○	●
Maintenance & repairs	●	○	○	●
Utilities & safety checks	●	○	●	○
Consumables & pantry stock	○	●	○	○
Fleet readiness & cleaning	●	●	○	○
Asset renewal & capacity planning	○	○	●	○
Reporting & assurance	●	●	●	○

● Primary cycle for this function · ○ Not on this cycle

1.3 THE OPERATING MANUAL

Systems of record

Two systems govern every decision. Discipline in how we use them is what makes the whole operation visible and auditable. If a system is wrong, the system is corrected before work proceeds — personal judgement does not override it.

Uplisting

The authoritative source for accommodation activity. No alternative source is accepted. It governs:

- Arrival dates and times
- Length of stay
- Same-day turnovers (check-out and check-in)
- Third-day cleaning triggers, recurring for long stays

Cleaning schedules are derived from Uplisting data alone.

Asana

The authoritative system for work control — the single work register. Everything is logged here:

- Maintenance issues & asset defects
- Cleaning observations
- Guest & internal staff requests
- Security & access concerns

Work is not actioned unless it is logged. Verbal requests become tasks before work begins.

The work-control workflow

Every issue, complaint and service request — whoever raises it — follows the same path. **It all routes through Jho**, who coordinates the Asana queue under May's direction. The task is the single source of truth from intake to closure.

STEP 1 · INTAKE

Raised & routed to Jho

Staff, cleaner, driver, guest or contractor raises an issue. All requests funnel to Jho — the single point of contact.

STEP 2 · LOG

Logged in Asana

Jho creates a clear, categorised task with description and photos. No duplicates; verbal requests are converted to tasks.

STEP 3 · TRIAGE

Prioritised by May

May sets priority and direction. Jho coordinates the queue under that direction — never prioritising or approving alone.

STEP 4 · ACTION

Actioned or escalated

Assigned and resolved within authority, or stabilised and escalated to a contractor where it exceeds internal capability.

STEP 5 · CLOSE

Closed & reviewed

Closed only on confirmation. Patterns are reviewed so recurring faults are designed out, not just repaired.

THE RULE

If it isn't in Asana, it isn't happening. A task gives every piece of work an owner, a history and a finish line — that's what makes the department accountable rather than busy.

Operating philosophy & escalation

A few principles sit underneath every decision. They explain *why* the rhythms in the rest of this manual are shaped the way they are.

Readiness first

Short-stay readiness takes priority over all other work. Fixed time windows are protected. The daily plan is locked once — replanning is the exception, not the norm.

Use the hours well

Early hours reduce risk before buildings get busy. Later hours manage outcomes. Noise is avoided; visibility is maintained throughout.

Log once, track to close

Problems are logged once, tracked until closed, and reviewed for patterns. Reporting exists to drive change — never produced for its own sake.

How a problem moves

Escalation is deliberate, not a reflex. Everyone can see a problem; the question is always the same — resolve, stabilise, or escalate.

1

Observed

Anyone notices an issue during cleaning, transport, inspection or daily work — and reports it to Jho rather than fixing it quietly.

2

Logged in Asana

Jho captures it as a task with a clear description and photos, so it is visible and traceable from the first moment.

3

Triaged by May

May assesses urgency against guest readiness, safety and business continuity, then chooses the path:

Resolve

Fixed within authority & skill by Arvin or the team.

Stabilise

Made safe now; contractor engaged for full repair.

Escalate

Contractor or expenditure approved by May.

4

Closed on confirmation

The task is closed only when completion is confirmed — never assumed. Critical safety items are confirmed personally.

5

Reviewed for patterns

Recurring faults are surfaced in weekly and monthly reviews so the root cause is addressed, not just the symptom.

1.5 THE OPERATING MANUAL

Roles & working arrangements

Six people, one chain of accountability. All roles are full-time except the Facilities Assistant, who is allocated part-time to Facilities support. Full duty statements are in part two — this is the team at a glance.

Person	Role	Pattern	Owns
May	Facilities Manager	Full-time · on call weekends	Accountability for the whole environment — staff, budget, priorities, risk, fleet compliance, capacity planning.
Jho	Facilities Assistant	Part-time · Mon–Fri	Single intake point for all requests; coordinates the Asana queue under May’s direction; reporting.
Arvin	Maintenance Lead	Full-time · Mon–Fri	Maintenance, inspections, presentation, access & logistics — plus traffic management & concierge cover.
Jong	Driver & Front-of-House	Full-time · Mon–Fri	Staff transport, fleet readiness & protection — plus traffic management & concierge cover.
Venus & Ivy	Cleaning team	Full-time · weekend on call	Accommodation & building cleaning, laundry, pantry & cleaning inventory, defect observation.

Coverage across the day

Duty windows are staggered so risk is covered early and outcomes are managed late. The fixed task windows (cleaning, transport) sit inside these.

CONCIERGE DESK — NEVER UNATTENDED IN THE DAY

Only BBT has parking, and the fleet is stored there. Arvin and Jong both hold traffic-management duties, and **at least one of them must be at the BBT concierge desk through the day** — managing the parking forecourt and vehicle ingress and egress. They coordinate cover between transport runs, inspections and breaks so the desk is never left empty without the Manager’s approval.

Accommodation cleaning framework

Accommodation cleaning follows strict rules that prevent scope creep and overload. With two cleaners, properties can be turned around in parallel — but only the properties the rules authorise, and only within the fixed window.

The cleaning cycle

Every clean follows the same path, driven entirely by Uplisting. Judgement does not add properties to the list.

Laundry & linen

Laundry volume varies with occupancy and is managed as required. Linen is handled by property, washed, dried, folded and stored to a consistent standard. Damaged or stained items are removed from circulation, and shortages are reported promptly. Quality is maintained; improvisation is avoided.

1.7

REGULAR TASK CYCLE · DAILY

Daily operating rhythm

The day runs to a known shape. Each step has a purpose: remove risk early, lock the plan once, protect the fixed windows, and close cleanly. The concierge desk stays covered throughout.

6:00am

**Early operations & vehicle readiness**

Arvin and Jong commence. Jong uncovers and safety-checks the fleet at BBT; Arvin runs early inspections across BBT and BBN. Focus is limited to safety, access and urgent defects. Anything unresolved is escalated to May by message.

6:30–
8:00am**Morning staff transport**

Jong runs the approved transport routes on time. Arvin covers early access, urgent defects and opens up the concierge desk so the forecourt is managed as vehicles begin arriving.

8:30am

**Pre-start control**

On-site presence is established at the BBT concierge desk. Jho reviews Uplisting — arrivals, stay lengths and cleaning triggers — and prepares a concise summary for May. Surprises are removed before the day builds.

9:00am

**Manager triage & lock-in**

May commences and works through the summary with Jho. Decisions are made once: which properties clean, whether a check-in needs attendance, cleaner timing, May's 2–6 availability, and priority maintenance. Asana tasks are created or updated and the plan is locked.

9:20am

**Stand-up**

A short stand-up for confirmation, not debate. Each person confirms understanding; no new work is introduced. Shared clarity for the day.

11:00am–
1:40pm**Accommodation cleaning**

Venus and Ivy depart BBT and clean only authorised properties, in parallel, returning by 1:40. Jho monitors guest messages and escalates readiness risks only. The concierge desk stays covered by whichever of Arvin or Jong is on site.

2:00–
3:00pm**Building cleaning — BBT & BBN**

The cleaning team restores Levels 2–5 across both buildings, clearing lunch-period residue. This protects two 24×7 environments where hygiene and presentation are highly visible.

2:00–
6:00pm**Check-in control window**

Focus shifts to arrivals. May attends residential check-ins and check-outs and handles guest liaison for visiting Brainbox clients. Jho manages guest messaging. Arvin and Jong hold the forecourt and concierge. Internal meetings are avoided on check-in days.

End of day

**Clean close**

Jho prepares the daily report; May reviews exceptions only. Open issues roll forward visibly in Asana. The day closes without loose ends.

1.8

REGULAR TASK CYCLE · WEEKEND

Weekend operations

Weekend work is controlled and exception-based. This protects the team from burnout and preserves weekday capacity.

Cleaning

Venus and Ivy work only when triggered by the cleaning rules — same-day turnover or a third-day stay. No discretionary cleaning.

Management

May is on call for guest messaging and check-ins, and for guest liaison where Brainbox clients are staying.

Everything else

No discretionary tasks are introduced. All issues are logged in Asana for review on the next business day.

1.9

REGULAR TASK CYCLE · WEEKLY

Weekly rhythm

Each week follows a pattern that distributes effort evenly and prevents backlog. The daily rhythm runs underneath every day; this is where the week's focus shifts.

Monday	Tuesday	Wednesday	Thursday	Friday
Plan Establish the week's plan. Confirm bookings, priorities and any check-ins ahead.	Buildings Focus on BBT & BBN — presentation, common areas and preventive checks.	Residential Residential maintenance and property inspections between cleans.	Fleet Fleet and compliance — vehicle cleaning, checks, licensing and servicing status.	Assure Confirm quality and weekend readiness. End-of-week review; note trends.

END OF WEEK

An end-of-week review notes trends and makes adjustments deliberately. Jho prepares the weekly report — tasks opened and closed, recurring issues, cleaning volume, and check-ins attended — so May sees the picture without reviewing raw data.

Monthly rhythm

Each month provides a higher-level view, so the department evolves rather than reacts. These four stages repeat every month.

01

Safety & maintenance inspection

A structured inspection across both buildings, residential and short-stay properties, and the fleet — conducted by May, Betina and Arvin, with findings logged.

02

Preventive maintenance

Corrective and preventive actions are planned and prioritised from the inspection findings, with critical items confirmed closed.

03

Review & assess

Guest satisfaction is reviewed and capacity assessed across premises and fleet — identifying constraints before they bite.

04

Refine systems

Processes and priorities are refined from the evidence, then carried into the next month's plan.

MANDATORY

The monthly full safety and maintenance inspection covers fire, electrical, water and access safety items across every asset, including fleet. It uses a standard checklist, all findings are logged, and critical items are confirmed closed. This cadence makes risk systematic rather than incident-driven.

1.11 THE OPERATING MANUAL

Reporting & assurance

Reporting is structured and factual — neutral language, emotion excluded. It exists to drive change, not to be produced for its own sake.

Cadence	Report	Owner	Purpose
Daily	Verbal execution report	Jho → May	Confirm execution; surface exceptions for May to review.
Weekly	Facilities report	Jho	Tasks opened/closed, recurring issues, cleaning volume, check-ins attended.
Monthly	Fleet & Facilities meeting	Minuted by Jho	Trends, persistent fault categories and decisions across the function.
Monthly	Property financial report	May → Director	Financial position across the property portfolio.

1.12 THE OPERATING MANUAL

Asset register & renewal

Every major Fleet & Facilities asset is recorded, reviewed on a fixed cycle, and carried on a renewal plan — so replacement is budgeted and deliberate, never a surprise.

The asset register is the single source of truth for what we own, its condition, and when it is due for renewal. It underpins capacity planning, the monthly safety inspection and the property financial report. Assets are purchased, replaced or written off only in line with policy and the approved budget.

What the register holds

The bi-annual asset review

Twice a year, May and Jho review the full register against policy and budget. The review confirms condition, records anything purchased, replaced or written off, and refreshes the renewal plan for every major asset.

Example — simple asset renewal plan

A renewal plan is just the register sorted by the year each asset falls due, with an estimated cost. This is illustrative — figures and dates are examples only.

Asset	Location	In service	Life	Condition	Renewal due	Est. cost
Toyota HiAce — staff van	BBT fleet	2019	8 yrs	Fair	2027	₱1,850,000
Backup generator (genset)	BBT	2018	10 yrs	Good	2028	₱950,000
Passenger lift — modernisation	BBN	2015	15 yrs	Fair	2030	₱1,200,000
Split-system aircon × 8	BBT L2–5	2021	7 yrs	Good	2028	₱640,000
Short-stay whitegoods (fridge/WM)	Properties	2022	6 yrs	Good	2028	₱420,000
CCTV & access-control system	BBT & BBN	2020	6 yrs	Fair	2026	₱380,000
Commercial water pump	BBN	2017	10 yrs	Monitor	2027	₱180,000

READING THE PLAN

Items due in the current or next year (highlighted) move into the budget cycle for approval; later years are indicative and refined at each bi-annual review. Sorting by **renewal due** shows the spend profile at a glance and prevents several major assets falling due in the same year unnoticed.

1.13

THE OPERATING MANUAL

Non-negotiable rules

Everything above reduces to a short list that does not bend. When in doubt, these win.

- 1 **Uplisting** governs accommodation cleaning — the only booking source.
- 2 **Asana** governs all work control — the only work register. If it isn't logged, it isn't actioned.
- 3 All issues, complaints and requests **route through Jho**.
- 4 Cleaning windows are **fixed**; building cleaning across BBT & BBN is mandatory.
- 5 The **concierge desk is never unattended** during the day without the Manager's approval.
- 6 Manager availability is **protected on check-in days**.
- 7 Vehicle **licensing and maintenance never lapse**; unsafe vehicles are not operated.
- 8 Weekend work is **exception-based**; the monthly safety inspection is mandatory.

1.14

THE OPERATING MANUAL

Operating outcome

This manual exists to create calm. It reduces noise, protects people's time, and improves reliability.

When it is followed, the Fleet & Facilities Department becomes predictable. Predictability builds trust, and trust reduces escalation. This is the authority for how the work is done — and it works best when the whole team holds to it together.

ALWAYS BE KIND

Structure is what lets us be kind under pressure — to guests, to colleagues, and to ourselves. Calm systems make room for it.

02

Duty statements

What each person owns, day to day — their purpose, responsibilities, the decisions they may make, and when to escalate. One chain of accountability, five clear roles.

2.1 May — Facilities Manager

2.2 Jho — Facilities Assistant (part-time)

2.3 Arvin — Maintenance Lead

2.4 Jong — Driver & Front-of-House

2.5 Venus & Ivy — Cleaning team

DUTY STATEMENT 2.1

Facilities Manager

May · the central control & forward-planning authority

REPORTING LINE

Reports to senior management as designated

PATTERN

Full-time · from ~9:00am · on call weekends

SCOPE

Buildings, accommodation & fleet

The Facilities Manager provides firm operational control across buildings, accommodation and fleet, ensuring everything runs safely, legally and predictably while staying scalable as demand grows. The role is accountable for **outcomes, not volume of activity** — control, anticipation and early intervention are the core expectations, and the role sets the behavioural standard for the whole function.

WHAT GREAT LOOKS LIKE

The whole operation runs quietly — problems are anticipated and handled before anyone feels them. The team is clear, capable and calm, the budget is in control, and nothing about safety, fleet or guest readiness is ever a surprise.

Overall accountabilities

Staff management

Training & development

Budget oversight

Service reliability

Guest readiness & experience

Safety & compliance

Fleet licensing & maintenance

Capacity planning

Systems & reporting discipline

Sustainable workload

Core responsibilities

Staff management, training & delegation

Lead the team without micromanagement. Set clear expectations at stand-up, delegate tasks, monitor workload balance, and arrange training and development so the team stays capable as demand grows. Intervene early where drift or overload appears.

GREAT The team knows what's expected, feels supported and grows — overload and turnover are rare.

Daily operational control

Review Uplisting, confirm check-in attendance, approve the cleaning list, protect the fixed windows, and lock the daily plan once.

GREAT The plan is locked by mid-morning and rarely needs reopening.

Check-in/out & client liaison

Attend residential check-ins and check-outs, and act as guest liaison when Brainbox clients visit the facilities or stay in company accommodation — a controlled, confident arrival every time.

GREAT Guests and clients feel expected and well looked after on every arrival.

Financial & budget oversight

Oversee the Facilities budget, approve expenditure within authority, keep external work cost-aware, and produce the monthly property financial report for the Director.

GREAT Spend is predictable, justified and reported on time — no surprises for the Director.

Risk & escalation management

Act as the escalation point. Assess issues, decide whether to resolve, stabilise or escalate, and document decisions where exceptions occur.

GREAT The right call is made quickly, and the reasoning is on record.

Accommodation standards

Hold third-day and same-day turnover rules, run periodic spot checks, and address recurring quality or readiness failures.

GREAT Standards hold without re-cleans, and recurring issues get designed out.

BBT & BBN oversight

Ensure daily post-lunch cleaning happens in both buildings and that hygiene, presentation and access standards hold across two 24×7 environments.

GREAT Both buildings stay fresh and presentable through every peak.

Vehicle fleet accountability

Maintain the vehicle register, keep licensing and registration current, track servicing and inspections, and approve servicing, repairs and replacements. No unsafe vehicle operates.

GREAT Licensing and servicing never lapse; no unsafe vehicle ever moves.

Monthly safety inspection

Conduct the structured monthly inspection across buildings, properties and fleet with Betina and Arvin; log findings, prioritise corrective actions and confirm critical items closed.

GREAT Every inspection is completed on time with critical items closed.

Capacity planning

Maintain forward visibility on premises and fleet demand, identify constraints early, and prepare recommendations so capacity scales ahead of need.

GREAT Constraints are seen and acted on well before they bite.

Contractor management

Approve contractor engagement where work exceeds internal capability, define scope and urgency, and confirm quality and completion in Asana.

GREAT Contractors deliver to scope and budget, confirmed in Asana.

Systems governance & reporting

Keep Uplisting the sole booking source and Asana the sole work register, reject work that bypasses them, and use daily, weekly and monthly reporting to drive improvement.

GREAT Uplisting and Asana are trusted because nothing bypasses them.

MAY MAY

- ✓ Set priorities and approve exceptions
- ✓ Manage staff and delegate work
- ✓ Engage contractors
- ✓ Approve fleet servicing and replacement
- ✓ Approve Facilities expenditure within authority

MAY MAY NOT

- Ignore system data
- Permit unlicensed vehicle operation
- Allow fixed windows to be eroded without cause

Performance is measured by

Stability, foresight and control — predictable operations, no lapses in vehicle licensing or servicing, completed monthly inspections, early identification of capacity constraints, minimal last-minute escalation, and high internal and guest confidence.

NON-NEGOTIABLE

Short-stay readiness overrides all other work · cleaning windows are protected · monthly safety inspections are mandatory · vehicle licensing and maintenance never lapse · capacity planning is proactive · Asana remains the single source of truth.

DUTY STATEMENT 2.2

Facilities Assistant

Jho · the system interface — intake, control & reporting

REPORTING LINE

Reports to the Facilities Manager

PATTERN

Part-time · Mon–Fri · no weekends

EFFORT

Short structured blocks; capped & protected

The Facilities Assistant provides administrative control, visibility and reporting discipline across the function **without absorbing operational decision-making**. The role is the single system interface between bookings, requests, issues and reports — reducing interruption to the Manager. It does not direct staff or approve work; it ensures information is accurate, timely and traceable.

WHAT GREAT LOOKS LIKE

Nothing falls through the cracks. Every request is captured the moment it arrives, the Asana queue is clean and current, and May starts each day with a clear picture — without ever being interrupted to assemble it.

SINGLE POINT OF CONTACT

All Fleet & Facilities issues, complaints and service requests route through Jho. Jho coordinates the Asana task queue **under direction from May** — logging and ordering work, never prioritising or approving it alone.

Core responsibilities

Request intake & routing

Receive every issue, complaint and request from staff, cleaners, driver, guests or the Manager. Acknowledge promptly and convert each into a clear, categorised Asana task — nothing actioned without visibility.

GREAT Every request is acknowledged fast and turned into a clear task — nothing is lost.

Asana queue coordination

Maintain Asana as the single register under May's direction: clear descriptions, photos attached, no duplicates, statuses kept current. Order the queue as directed; do not self-prioritise or assign.

GREAT The queue is clean, current and duplicate-free at any moment.

Uplisting monitoring

Each weekday morning, review arrivals, departures and in-stay guests; identify same-day turnovers and third-day triggers; extract a simple daily summary.

GREAT Triggers are spotted early and never missed.

Daily control summary

Prepare a short, factual summary for the Manager — cleaning triggers, check-in days and any high-risk issues — so the daily plan can be locked without searching.

GREAT May can lock the plan from the summary alone.

Task status tracking

Check status each weekday, flag stale or unclear tasks, prompt follow-up, and close only when confirmation is received. Nothing ages unseen.

GREAT No task ages unseen; stale items are chased before they slip.

Guest messaging

Handle routine guest messaging in business hours using approved templates. Acknowledge and log; escalate readiness or access risks immediately. No commitments or negotiation.

GREAT Guests get prompt, accurate replies; risks reach May at once.

Observation capture

Receive defect reports from Venus, Ivy or Arvin and ensure they are logged correctly with supporting detail — captured once, acted on systematically.

GREAT Every defect lands in Asana with the detail needed to act.

Weekly & monthly reporting

Produce the concise weekly report and support monthly reporting and the Fleet & Facilities meeting minutes — factual, trend-focused, within the time envelope.

GREAT Reports are factual, on time, and show the trends that matter.

JHO MAY

- ✓ Access Uplisting and Asana
- ✓ Log, order and update tasks as directed
- ✓ Communicate factual information to guests

JHO MAY NOT

- Approve work or change priorities alone
- Allocate tasks to staff
- Commit to timelines or outcomes

Performance is measured by

Control, clarity and restraint — clean, accurate Asana records, no unlogged work, timely daily summaries, low administrative interruption to the Manager, and adherence to the capped weekly effort.

NON-NEGOTIABLE

Asana is the only work register · Uplisting is the only booking source · no work is actioned without visibility · effort is capped and protected · scope creep is escalated, not absorbed.

DUTY STATEMENT 2.3

Maintenance Lead

Arvin · early detection, rapid response & prevention

REPORTING LINE

Reports to the Facilities Manager

PATTERN

Full-time · Mon–Fri · 6:00am–6:00pm
window

FOCUS

Maintenance, prevention & access

The Maintenance Lead maintains operational continuity across BBT, BBN, residential and short-stay properties and supporting assets. The role focuses on early detection, rapid response to defects, and preventing downstream failures that would disrupt cleaning, guest readiness or safety. It is **execution-focused** — planning and approval sit with the Manager — and now also carries shared traffic-management and concierge cover.

WHAT GREAT LOOKS LIKE

Issues are caught before they become faults, and faults before they become complaints. Check-in windows pass without drama, the forecourt stays controlled, and recurring problems quietly disappear.

Core responsibilities

Early-morning risk reduction

Start at 6:00am with inspections before peak activity — access points, lighting, doors, gates and overnight issues across both buildings. Risks reduced before staff and guests arrive.

GREAT Hazards are found and cleared before staff and guests arrive.

Reactive maintenance

Work assigned Asana tasks promptly within priority, carry out minor repairs within authority, and stabilise issues that need a contractor with clear fault notes.

GREAT Tasks are actioned in priority and stabilised cleanly when a contractor is needed.

Preventive inspections

Routine checks across BBT, BBN and residential properties — fittings, fixtures, appliances and finishes — identifying emerging issues before failure.

GREAT Emerging faults are caught before they fail.

Accommodation readiness support

Resolve defects that threaten same-day check-in readiness when directed, coordinating with the Manager and avoiding non-essential work during critical windows.

GREAT Check-in defects are resolved without disrupting the window.

Traffic management & concierge

Share concierge-desk cover with Jong so the BBT forecourt is always managed — guiding vehicle ingress and egress, preventing unsafe parking, and keeping the desk staffed through the day.

GREAT The forecourt stays orderly and the desk is always covered.

Access & logistics

Provide access for cleaners, drivers and contractors, and assist with safe movement of items so operational flow is never held up.

GREAT Cleaners, drivers and contractors are never held up for access.

Presentation & fleet support

Address minor presentation defects, reset fixtures, and provide minor fleet assistance — identifying and reporting visible vehicle defects for logging.

GREAT Small defects are fixed or logged before anyone notices them.

Afternoon coverage

Stay available across the full window, supporting check-in issues if escalated and stabilising late-day issues to avoid after-hours escalation.

GREAT Late-day issues are stabilised, avoiding after-hours escalation.

ARVIN MAY

- ✓ Carry out minor repairs within skill and safety limits
- ✓ Stabilise faults to prevent escalation
- ✓ Recommend contractor involvement

ARVIN MAY NOT

- Approve expenditure or engage contractors independently
- Change priorities without direction
- Undertake discretionary work not logged or approved

Performance is measured by

Reliability, judgement and follow-through — low repeat faults, few urgent escalations during check-in periods, early identification of issues, accurate task updates, and reliable coverage across the full window.

NON-NEGOTIABLE

Follow the daily plan · respect fixed cleaning windows · keep the concierge desk covered · do not self-prioritise · log issues accurately · escalate early rather than late.

DUTY STATEMENT 2.4

Driver & Front-of-House

Jong · transport, fleet protection & a controlled forecourt

REPORTING LINE

Reports to the Facilities Manager

PATTERN

Full-time · Mon–Fri · on-site BBT
8:30–4:00

FOCUS

Transport, fleet & front-of-house

The Driver & Front-of-House role ensures reliable staff transport, protects and presents the vehicle fleet, and maintains a controlled, safe and orderly entry environment at BBT — the only site with parking. The role provides **visible operational discipline**: reducing risk, preventing congestion, protecting assets and reinforcing security through presence, and shares traffic-management and concierge cover with Arvin.

WHAT GREAT LOOKS LIKE

Staff always arrive on time and safely, vehicles are protected and ready, and the BBT forecourt runs smoothly — no congestion, no incidents, and a visibly secure, welcoming entrance.

Core responsibilities

Early-day vehicle readiness

From 6:00am, uncover and prepare vehicles, run visual safety checks on tyres, lights, mirrors and fuel, and escalate any defect immediately for logging.

GREAT Vehicles are checked, safe and ready before the first run.

Morning staff transport

Run the approved route and timetable, collect staff punctually, drive defensively, and confirm all scheduled drop-offs so staff arrive on time and safely.

GREAT Staff arrive on time, every time, driven safely.

Post-transport vehicle control

Return vehicles to allocated bays at BBT, cover those not in immediate use, secure keys in designated locations, and report anything noticed in transit.

GREAT Vehicles return covered, secured and accounted for.

Traffic management & concierge

Hold the BBT concierge desk and forecourt — guiding vehicle ingress and egress, preventing unsafe or unauthorised parking, and intervening early to avoid congestion. Shared with Arvin so the desk is never unattended.

GREAT The forecourt flows with no congestion and the desk stays manned.

Entry-area security

Observe entry points, challenge unknown persons politely, ensure doors, gates and barriers function, and escalate security concerns immediately.

GREAT Entries are watched and concerns are raised at once.

Entry-area presentation

Keep the entry neat and professional — remove litter, clean glass, keep signage visible, and report damage or deterioration.

GREAT The entrance always looks clean, professional and welcoming.

Fleet protection

Cover vehicles when parked, uncover promptly when needed, park correctly and securely, and prevent unauthorised access or misuse.

GREAT No preventable damage; vehicles are always protected.

Weekly vehicle cleaning & support

Wash exteriors and clean interiors on the nominated day, inspecting for wear during cleaning; provide additional facilities support when directed during peak periods.

GREAT Vehicles are presentable and wear is caught during cleaning.

JONG MAY

- ✓ Operate vehicles as scheduled
- ✓ Control parking and access within assigned areas
- ✓ Report defects and security concerns

JONG MAY NOT

- Authorise repairs or expenditure, or engage contractors
- Change transport routes without approval
- Allocate work to others

Performance is measured by

Reliability, visibility and discipline — on-time transport runs, no preventable vehicle damage, orderly parking areas, early detection of security or access issues, and accurate reporting.

NON-NEGOTIABLE

Staff transport is the first priority · vehicles are covered when not in use · the concierge desk and forecourt are not left unattended without approval · security concerns are escalated immediately · all issues are logged.

DUTY STATEMENT 2.5

Cleaning team

Venus & Ivy · readiness, hygiene & presentation

REPORTING LINE

Report to the Facilities Manager

PATTERN

Full-time · fixed windows · weekend
on call

FOCUS

Accommodation & building cleaning

The cleaning team ensures accommodation readiness, hygiene and presentation across the short-stay properties and the BBT and BBN commercial buildings. The work is **time-critical and sequence-dependent** — cleaning must happen within fixed windows to support guest check-ins and two 24×7 environments. With two cleaners, properties and buildings can be covered in parallel. Planning and scheduling sit with the Manager and the Assistant.

WHAT GREAT LOOKS LIKE

Every authorised property is guest-ready on time, every time, to a standard a guest would photograph. Buildings feel fresh after lunch, linen is always in supply, and defects are reported the moment they're spotted.

WORKING AS A PAIR

Venus and Ivy split the authorised property list to turn rooms around within the window, then regroup for building cleaning. Scope is defined centrally — the team executes and reports, and never adds properties or tasks itself.

Core responsibilities

Accommodation cleaning

Clean and sanitise bathrooms and kitchenettes, vacuum and mop, remake beds, empty bins and wipe high-touch surfaces — only when triggered by the approved rules.

GREAT Every triggered unit is spotless and guest-ready on time.

Fixed window, 11:00–1:40

Depart BBT on time, travel without delay, complete all authorised cleans, and prepare to return by 1:40pm — no overruns that affect building duties or check-in readiness.

GREAT All authorised cleans finish inside the window, every day.

Laundry & linen

Strip, bag and separate linen by property; wash, dry, fold and store to standard; remove stained or damaged items; and report shortages so complete sets are always available.

GREAT Clean, complete linen sets are always available.

Building cleaning — BBT & BBN

Clean Levels 2–5 daily, 2:00–3:00pm — kitchens, pantries, shared surfaces, bins, floors and high-touch areas — restoring hygiene after lunch use.

GREAT Both buildings feel fresh again within the hour after lunch.

Weekly inventory checks

Once a week, check pantry consumables and cleaning supplies, paper goods, PPE and equipment condition; report low stock or faults early to the Assistant.

GREAT Stock and equipment issues are flagged before they run out.

Observe & report

Spot leaks, electrical faults, appliance failure, loose fittings, mould or odours during cleaning. Photograph, report urgent items immediately, and ensure they reach Asana — reported, not fixed.

GREAT Defects reach Asana the moment they're spotted.

THE TEAM MAY

- ✓ Carry out all authorised cleaning tasks
- ✓ Handle laundry and linen
- ✓ Report defects and shortages

THE TEAM MAY NOT

- Change schedules or add properties to the list
- Approve additional work
- Undertake repairs

Performance is measured by

Consistency, hygiene standards and adherence to process — cleaning completed within fixed windows, low cleanliness complaints, early reporting of defects and shortages, and reliable weekend response when triggered.

NON-NEGOTIABLE

Accommodation cleaning happens only within the fixed window · building cleaning is mandatory · no tasks are added after daily lock-in · maintenance issues are reported, not fixed · all instructions flow through the Facilities Manager.

SECTION 2.6

Training & competency matrix

The capability each role is expected to hold, and where to invest in training

May owns training and development for the team. This matrix sets the expected competency level for each role — use it to plan induction, refreshers and certification, and to spot gaps before they affect safety or service. Reassess at least annually and whenever a role or asset changes.

● **Lead** — accountable / expert · ● **Practitioner** — performs routinely · ○ **Awareness** · – not required

Safety & compliance

Competency	May	Jho	Arvin	Jong	Venus & Ivy
WHS & safe work practices	●	○	●	●	●
Manual handling	○	○	●	●	●
Chemical handling & SDS	○	–	●	○	●
Fire & emergency response	●	○	●	●	○
First aid	●	○	●	●	○

Systems & reporting

Competency	May	Jho	Arvin	Jong	Venus & Ivy
Asana — work control	●	●	●	●	○
Uplisting — bookings	●	●	–	–	–
Reporting & records	●	●	○	○	○
Asset register & renewal planning	●	●	○	○	–

Operational skills

Competency	May	Jho	Arvin	Jong	Venus & Ivy
Cleaning & presentation standards		–			
Laundry & linen management		–	–	–	
Maintenance & minor repairs		–			–
Defensive driving & licence	–	–			–
Traffic management & concierge		–			–
Vehicle inspection		–			–

Leadership & stakeholders

Competency	May	Jho	Arvin	Jong	Venus & Ivy
Staff leadership & delegation		–	–	–	–

Contractor management				–	–

PUTTING IT TO WORK

Every **Lead** and **Practitioner** cell should be backed by current training or certification — first aid, fire response, chemical handling and driver licensing in particular. May reviews the matrix at induction and at least annually, and books refreshers before competencies lapse.

03

Checklists

Print, tick and sign. These are the working checklists behind the routines in part one — carried out on the ground, then logged in Asana.

3.1 Studio apartment — cleaning & consumables routine

3.2 Multi-level building — monthly safety & compliance inspection

3.3 Fleet vehicle — weekly maintenance inspection (driver)

Studio apartment — cleaning & consumables

Work top to bottom, back to front, so finished areas stay clean. Complete every clean within the fixed window. Report — never fix — any maintenance issue you find.

1 Arrival & setup

- ☐ Confirm the property is on today's authorised list (Uplisting)
- ☐ Knock, confirm vacant, enter with correct key/code
- ☐ Put on PPE; set out caddy, cloths and chemicals
- ☐ Open curtains; check lights, aircon and hot water work
- ☐ Note any damage or items left behind before starting
- ☐ Strip all used linen and towels into the laundry bag

2 Bathroom

- ☐ Apply cleaner to toilet, shower and basin; let it dwell
- ☐ Scrub and flush toilet — bowl, seat, lid, base
- ☐ Clean shower walls, screen, taps and drain; clear hair
- ☐ Clean basin, vanity and taps; polish mirror streak-free
- ☐ Wipe tiles, skirting and switch plates
- ☐ Empty bin, sanitise and reline
- ☐ Mop floor; replace bath mat

3 Kitchenette

- ☐ Clear and wipe benches and splashback
- ☐ Clean sink and taps; clear and deodorise drain
- ☐ Microwave inside and out; kettle descaled and emptied
- ☐ Cooktop and rangehood degreased
- ☐ Fridge wiped inside, old items removed, set to temp
- ☐ Wipe cupboard fronts and handles; check crockery clean
- ☐ Empty bin, sanitise and reline

4 Living & sleeping area

- ☐ Dust all surfaces, shelves, sills and skirting
- ☐ Wipe high-touch points — switches, handles, remotes
- ☐ Clean mirrors and glass; check windows
- ☐ Make bed with fresh linen; check mattress protector
- ☐ Fold/arrange spare towels and blankets
- ☐ Wipe TV, bedside and desk surfaces

5 Floors & finish

- ☐ Vacuum carpets, rugs and edges
- ☐ Vacuum then mop hard floors, working to the door
- ☐ Check the unit smells fresh — ventilate if needed
- ☐ Stage the room to standard (curtains, cushions, lights off)

6 Consumables restock

- ☐ **Bathroom:** hand soap, shower gel, shampoo, conditioner
- ☐ **Bathroom:** 2 toilet rolls (1 spare), tissues
- ☐ **Kitchen:** tea, coffee, sugar, milk sachets
- ☐ **Kitchen:** dishwashing liquid, sponge, paper towel
- ☐ **Laundry:** detergent, spare bin liners
- ☐ Replace any used welcome/information items

7 Handover & reporting

- | | |
|---|---|
| ☐ Final walk-through against this checklist | ☐ Remove all cleaning equipment and rubbish |
| ☐ Photograph the finished room | ☐ Lock up; confirm key/code secured |
| ☐ Report any defect (leak, fault, damage) to Jho for Asana | ☐ Confirm completion so the property is marked ready |

Monthly safety & compliance inspection

For a multi-level commercial building in Angeles City, Philippines. Inspect every level. Log all findings in Asana, prioritise corrective actions, and confirm critical items closed. Tick **Pass** mentally only when the item is fully compliant — otherwise raise a task.

1 Fire safety & emergency

- ☐ Fire extinguishers present, charged, tagged & in date (each level)
- ☐ Fire alarm panel normal; no faults; test as scheduled
- ☐ Smoke/heat detectors clean and functional
- ☐ Emergency & exit lighting illuminate on test
- ☐ Exit signage lit, visible and correct
- ☐ Fire exits, stairwells & corridors clear and unlocked
- ☐ Fire doors close and self-latch; not propped open
- ☐ Hose reels / sprinklers unobstructed; valves open
- ☐ Evacuation plan posted on each level; assembly area clear
- ☐ Valid FSIC (Fire Safety Inspection Certificate) on file

2 Electrical & power

- ☐ Main & distribution panels closed, labelled, accessible
- ☐ No exposed wiring, scorching or overheating smell
- ☐ Breakers/RCD tested; no persistent tripping
- ☐ Outlets & switches secure; no overloaded boards
- ☐ Generator/genset starts & carries load on test
- ☐ Automatic transfer switch operates; fuel level adequate
- ☐ Emergency & common-area lighting fully operational

3 Vertical transport & access

- ☐ Lift inspection certificate current & displayed
- ☐ Lift emergency phone/alarm works; levels accurate
- ☐ Stairwell handrails secure; treads even & non-slip
- ☐ Common areas & car park well lit
- ☐ Access control / CCTV operational at entries

4 Water, sanitation & HVAC

- ☐ Water pumps & pressure normal; tanks clean & secure
- ☐ No leaks, damp or water staining (check after rain)
- ☐ Drainage & downpipes clear; no pooling
- ☐ Comfort rooms clean, stocked & fully functional
- ☐ Aircon & ventilation serviced; filters clean

5 Structural & general

- ☐ Walls, ceilings & floors free of new cracks or damage
- ☐ Waterproofing & roof sound (rainy-season check)
- ☐ Glazing, balustrades & railings secure on upper levels
- ☐ Signage, fixtures & finishes intact
- ☐ Car park markings, barriers & bollards in order

6 Health, pest & documents

- ☐ Pest control current; no signs of infestation
- ☐ Garbage area clean, segregated & collected
- ☐ First-aid kits stocked & in date
- ☐ Occupancy & business permits current & displayed
- ☐ Sanitary permit & insurance current
- ☐ Previous inspection actions closed out

CRITICAL ITEMS

Any fire-safety, electrical or structural failure is logged immediately, prioritised, and confirmed closed before the inspection is signed off. Inspection conducted by May, Betina and Arvin.

Fleet vehicle — weekly maintenance check

Completed by the driver each week with the engine cold. Walk around the vehicle first, then check from the cab. Report any defect to Jho for logging in Asana — do not operate an unsafe or unroadworthy vehicle.

1 Exterior & body

- ☐ Bodywork free of new dents, scratches or damage
- ☐ Headlights, tail, brake & reverse lights all work
- ☐ Indicators & hazard lights work front and rear
- ☐ Number plates secure, clean & legible
- ☐ Mirrors intact, clean & correctly adjusted
- ☐ Windscreen free of cracks/chips; wipers & washers work

2 Tyres & wheels

- ☐ Tread depth legal on all tyres; even wear
- ☐ Pressures correct (incl. spare) — check when cold
- ☐ No cuts, bulges or embedded objects
- ☐ Wheel nuts secure; no missing nuts/caps

3 Under bonnet

- ☐ Engine oil at correct level & clean
- ☐ Coolant between min/max
- ☐ Brake & clutch fluid at level
- ☐ Windscreen washer fluid topped up
- ☐ Battery secure; terminals clean; no corrosion
- ☐ Belts & hoses intact; no visible leaks under vehicle

4 Cab & controls

- ☐ All seatbelts latch & retract
- ☐ Horn works; dashboard warning lights all clear
- ☐ Air-conditioning & demister work
- ☐ Interior clean; no rubbish or loose items
- ☐ Registration & insurance documents in vehicle
- ☐ Fuel card present; fuel level adequate for the day

5 Operation & brakes

- ☐ Foot brake firm; vehicle pulls up straight
- ☐ Handbrake holds on an incline
- ☐ Steering responsive; no pull or vibration
- ☐ Gear selection / transmission smooth

6 Safety equipment

- ☐ First-aid kit present & stocked
- ☐ Warning triangle / hazard kit present
- ☐ Fire extinguisher present, charged & in date
- ☐ Jack, wheel brace & tools present
- ☐ Spare tyre serviceable & inflated

Reference

The standards and records that keep the system consistent — service levels, system conventions, incident response, access control and document governance.

4.1 Response & resolution SLAs by Asana priority

4.2 Asana conventions

4.3 Vehicle accident & incident procedure

4.4 Keys, codes & access register

4.5 Document control

4.6 Monthly report

4.1

REFERENCE · SERVICE LEVELS

Response & resolution SLAs

Every Asana task carries a priority, and each priority carries a clear expectation — how fast it is acknowledged, and how fast it is resolved or made safe. This removes argument about what “urgent” means. SLA clocks run in business hours unless the item is a safety or guest-readiness risk, which runs around the clock.

Priority	What it means	Acknowledge	Resolve / make safe	Examples
P1 Critical	Danger to people, security breach, or a property unable to receive a guest now.	15 min	Make safe < 1 hr	Fire/electrical hazard, flood, no access for an arriving guest, vehicle accident.
P2 Urgent	Affects guest readiness, safety margin or fleet availability today.	1 hr	Same day	Aircon failure in an occupied unit, blocked drain, vehicle unserviceable for a run.
P3 Routine	Should be fixed soon but does not stop operations.	Same day	2–3 business days	Minor leak, worn fitting, presentation defect, light out in common area.
P4 Scheduled	Planned or preventive work with a target date.	1 business day	By planned date	Preventive maintenance, asset renewal, batch jobs from the monthly inspection.

IF IN DOUBT, RAISE IT HIGHER

Anything affecting safety or a guest arriving today is treated as P1/P2 until May confirms otherwise. Re-prioritising down is a decision; leaving something too low is a failure. A task that will breach its SLA is escalated before the deadline, not after.

4.2 REFERENCE · SYSTEMS

Asana conventions

A consistent queue is a readable queue. These conventions keep tasks findable, sortable and free of duplicates — so the work register stays the single source of truth.

Task naming

Every task name follows the same shape, so the list scans cleanly:

[Site] · [Category] – short description

BBT · Electrical

L3 kitchen power point sparking

Unit 5 · Plumbing

Shower draining slowly

Fleet · Vehicle

HiAce — front tyre wear

Categories

Maintenance

Electrical

Plumbing

Cleaning

Consumables

Safety

Access & security

Traffic / concierge

Vehicle

Guest request

Asset renewal

Admin

Every task carries

The essentials

- Name in the standard format
- Category & priority (P1–P4) set
- Assignee and due date
- Clear description — what, where, since when
- Photo where it helps

Housekeeping rules

- Search before creating — never duplicate
- Update status as work progresses
- Comment, don't reopen, for follow-ups
- Close only on confirmed completion
- Verbal requests become tasks before work starts

PRIORITY DEFINITIONS

P1 Critical · P2 Urgent · P3 Routine · P4 Scheduled — as defined in 4.1. Priority is set by May (or proposed by Jho and confirmed by May); it is never left blank.

Vehicle accident & incident

If a fleet vehicle is involved in an accident or incident, follow these steps in order. Safety first, then secure the scene, then record everything. Do not admit fault or agree to private settlement.

1

Make safe & check for injuries

Stop immediately. Check yourself and others for injury. If anyone is hurt, call emergency services first. Switch on hazard lights and set out the warning triangle.

2

Call for help

Where there is injury, danger or a crime, call emergency services. Then notify May immediately — do not wait until you return.

3

Do not admit fault

Stay calm and polite. Do not accept blame, sign anything, or agree to a private cash settlement. Exchange details only.

4

Exchange & gather details

Record the other driver's name, contact, licence, plate, vehicle and insurer; note any witnesses and the attending officer.

5

Photograph everything

Photograph all vehicles, damage, plates, the wider scene, road conditions and any injuries. More is better.

6

Report & log

Complete the report form below, give it to May, and log a P1 task in Asana so insurance and repair follow-up is tracked to closure.

Incident report form

DRIVER	VEHICLE / REGO	DATE & TIME
LOCATION	WEATHER / ROAD CONDITIONS	
INJURIES (Y/N & DETAIL)	POLICE ATTENDED (Y/N)	OFFICER / REF NO.
OTHER PARTY – NAME & CONTACT	OTHER PARTY – PLATE & INSURER	
WHAT HAPPENED (SEQUENCE OF EVENTS)		
PHOTOS TAKEN (Y/N)	ASANA TASK NO.	REPORTED TO MAY (TIME)
DRIVER SIGNATURE	RECEIVED BY (MAY)	DATE

Keys, codes & access register

Access is granted on a need-to-use basis and recorded. Keys are signed out and back; codes are changed on staff change or after any suspected compromise. May owns the register; Jho keeps it current.

Access levels

Level	Holder	Covers
Full	May (Facilities Manager)	All buildings, all properties, fleet, plant/comms rooms, master keys and all codes.
Operational	Arvin (Maintenance Lead)	BBT & BBN common and plant areas, all properties for maintenance, fleet keys.
Fleet & forecourt	Jong (Driver / FOH)	Fleet keys, BBT forecourt, concierge and entry areas, key cabinet.
Property	Venus & Ivy (Cleaning)	Authorised properties on the day's list and the laundry/store; issued and returned daily.
Admin	Jho (Assistant)	Systems (Uplisting, Asana), the register itself and office areas. No master keys.
Temporary	Contractors / guests	Time-limited, single-area access, issued and recovered by May or Arvin and logged.

Register – what is recorded

- Key / code ID
- Location or door
- Access level
- Issued to
- Date issued
- Date returned
- Code last changed
- Notes

KEY / CODE ID	LOCATION / DOOR	ACCESS LEVEL
ISSUED TO	DATE ISSUED	DATE RETURNED

CONTROL RULES

Keys are never copied without May's approval · codes are changed when a staff member leaves or a compromise is suspected · lost keys or exposed codes are reported and logged in Asana immediately · contractor and guest access is time-limited and recovered.

4.5

REFERENCE · GOVERNANCE

Document control

This is a controlled document. It is the authority for how Fleet & Facilities work is done; where it differs from habit or memory, the document wins. Changes are made deliberately, versioned, and re-issued — never edited on the run.

DOCUMENT OWNER

May Engreso · Facilities Manager

CURRENT VERSION

20260628

NEXT REVIEW

June 2027

Version numbers use the date format **YYYYMMDD** — the date the version was issued.

Version history

Version	Date	Owner	Summary of change
20260628	28 Jun 2026	May Engreso	Edition 2 reissue — added BBN; Asana as work register; team and traffic/concierge changes; asset register & renewal; checklists; competency matrix; reference section.
20250000	2025	Facilities Manager	Edition 1 — original Fleet & Facilities Operating Manual.

CHANGE CONTROL

Proposed changes go to the document owner. Approved changes are made to the master, the version (YYYYMMDD) is updated, and the new version is re-issued to the team. Superseded versions are archived, not deleted. The document is reviewed at least at the next review date above, and whenever roles, assets or systems change materially.

4.6 REFERENCE · REPORTING

Monthly report

Compiled by Jho and reviewed by May at the monthly Fleet & Facilities meeting. Each metric is recorded **this month against last month and a target**, so direction matters as much as the number. Figures are drawn from Asana, Uplisting and the asset register — not from memory.

Work control (Asana)

Metric	This month	Last month	Target
Tasks raised			—
Tasks closed			≈ raised
Tasks open at month-end			Trending down
Recurring / repeat faults (same issue, same asset)			Trending down
Backlog — tasks open > 7 days			Minimise
Backlog — tasks open > 30 days			0

Accommodation & cleaning

Metric	This month	Last month	Target
Cleans completed vs. triggered (turnover + third-day)			100%
Cleaning defects / re-cleans			Minimise
Guest-reported cleanliness issues			0

Buildings (BBT & BBN)

Metric	This month	Last month	Target
Common-area / hygiene complaints			0
Utilities incidents (power, water, aircon downtime)			Minimise

Metric	This month	Last month	Target
Vehicle availability / uptime			≥ 95%
Weekly inspections completed on time			100%
Accidents / incidents (and at-fault rate)			0
Servicing & registration currency (due / overdue)			0 overdue
Fuel spend			vs. budget

Access, security & traffic

Metric	This month	Last month	Target
Security incidents & access / key issues logged			Minimise
Lost keys / codes changed			Track

Safety & compliance

Metric	This month	Last month	Target
Monthly safety inspection completed (Y/N)			Yes
Inspection findings raised			—
Critical items closed vs. open			All closed

Asset & financial

Metric	This month	Last month	Target
Assets purchased / replaced / written off			Per policy
Renewals due next month (forecast spend)			Planned
Budget vs. actual			Within budget

People

Metric	This month	Last month	Target
Workload balance / overtime & weekend call-outs			Sustainable
Training / certifications overdue			0

Residential accommodation — occupancy

Night-stays totalled across every unit for the month, from Uplisting. The total is the headline occupancy figure for the portfolio.

Unit	Type	Nights available	Nights occupied	Occupancy %
Property 01	Short-stay			
Property 02	Short-stay			
Property 03	Short-stay			
Property 04	Short-stay			
Property 05	Short-stay			
Property 06	Residential			
Property 07	Residential			
Property 08	Residential			
Property 09	Residential			
Property 10	Residential			

Total night-stays (all units)

READING THE REPORT

The report exists to drive change, not to be filed. Anything off-target is tied to an Asana task or a decision in the monthly meeting — recurring faults, overdue compliance and ageing backlog are the first things reviewed.

Structure creates calm. Calm protects people's time.

When this manual is followed, the Facilities Department becomes predictable — and predictability builds trust.

Fleet & Facilities Operating Manual · Edition 2 · 2026 · Internal use only
